

Grade 6 Mathematics – Unit 6: Geometry

Phoenixville Area School District

Stage 1 Desired Results			
<p>PA Core Standards: M06.C-G.1.1 Find area, surface area, and volume by applying formulas and using various strategies</p> <p>PSSA Assessment Anchors: M06.C-G.1 Solve real-world and mathematical problems involving area, surface area, and volume.</p>	<i>Transfer</i>		
	<p>TRANSFER GOALS <i>Students will be able to independently use their learning to...</i></p> <ul style="list-style-type: none"> • <i>Problem-Solving:</i> Persistently apply various problem-solving strategies and organized approaches to accurately understand and solve problems and provide evidence to support response. • <i>Mathematical Vocabulary:</i> Interpret mathematical vocabulary and apply proper terminology to engage in meaningful oral and written expression that communicates mathematical thinking, problem-solving methods, and rationale. • <i>Reasoning:</i> Demonstrate mathematical resilience and conceptual understanding through the use of vocabulary, written expression, graphical representation, and alternate strategies. 		
	<i>Meaning</i>		
	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%; padding: 5px;"> <p>UNDERSTANDINGS <i>Students will understand that...</i></p> <ul style="list-style-type: none"> • One-, two-, and three-dimensional objects are described, classified, and analyzed by their critical attributes. • The accurate measurement of space is determined by the ability to visualize the object/problem situation and apply an appropriate algorithm. </td> <td style="width: 50%; padding: 5px;"> <p>ESSENTIAL QUESTIONS <i>Students will keep considering...</i></p> <ul style="list-style-type: none"> • What are the mathematical attributes of objects or processes and how are they measured or calculated? • How are spatial relationships, including shape and dimension, used to draw, construct, model and represent real situations or solve problems? </td> </tr> </table>	<p>UNDERSTANDINGS <i>Students will understand that...</i></p> <ul style="list-style-type: none"> • One-, two-, and three-dimensional objects are described, classified, and analyzed by their critical attributes. • The accurate measurement of space is determined by the ability to visualize the object/problem situation and apply an appropriate algorithm. 	<p>ESSENTIAL QUESTIONS <i>Students will keep considering...</i></p> <ul style="list-style-type: none"> • What are the mathematical attributes of objects or processes and how are they measured or calculated? • How are spatial relationships, including shape and dimension, used to draw, construct, model and represent real situations or solve problems?
