

Main Line Rehabilitation Associates, Inc., of Pennsylvania joins together with NeuroRestorative

We are excited to announce that Main Line Rehabilitation Associates is now part of NeuroRestorative. Together, we offer a comprehensive continuum of care throughout Pennsylvania. Our personalized programs are provided in home and community settings and are backed by the clinical expertise and strength of a national platform. We are dedicated to providing quality care to individuals with brain, spinal cord, and medically complex injuries and other neurological illnesses, helping them regain and maintain their independence.

Service Spotlight: Home and Community Program

Designed to occur in the home, school, workplace, or other locations within the community, our Cognitive Rehabilitation Therapy (CRT) model allows for skill development in a variety of environments to allow for generalization and broader application of skills and strategies. The goal of services is independent living in the individual’s home and community of choice. CRT services can be provided alone or in combination with other services. For individuals living in more rural areas, tele-rehabilitation services may be provided.

CRT is a one-to-one specialized therapy that addresses the cognitive deficits that result from an injury to the brain (stroke, traumatic brain injury, meningitis, etc.) or condition that results in problems with learning (multiple sclerosis, autism, developmental disability). Our Integrated Model focuses on providing education and skills training, developing compensatory strategies, and assisting the individual with applying the skills and strategies in everyday activities.

With a specialization in CRT, our program integrates the latest research with established clinical practices to produce strong outcomes for increased independence and community participation, as well as improved quality of life.

In addition to our Home and Community program, we also provide:
